

VISUAL PREPARATION / PRODUCTION / VFX

Visual Preparation & AI Supervision

Save time, reduce risk, decide before the shoot.

A short, visual and shareable document for producers, directors, departments and VFX.

ANTOINE GUEUGNEAU - VISUAL PREPARATION

The production gain

The value is not the image itself. The value is the decision it makes possible before heavy spend.

See earlier.
Decide faster.
Build smarter.

01

Less uncertainty

Locations, angles, movements, VFX and constraints become visible before the shoot.

02

Fewer iterations

One shared reference circulates between direction, production, cinematography, art department and VFX.

03

Lower hidden cost

Decide early: shoot it, simplify it, post-produce it, abandon it or secure it.

A decision interface

Real scouting -> visual option -> de

Each case starts from something concrete: a real location, a shooting constraint, a directing intention, a VFX need or a production problem. Visual preparation turns that starting point into useful, comparable and shareable images.

01

INTENT

Script / need

02

REALITY

Location / constraint

03

EXPLORATION

Images / options

04

VALIDATION

Shared decision

05

FABRICATION

Shoot / VFX

8 producer-facing cases

Visual preparation images designed to secure decisions, not to demonstrate technology.

CASE 01
Time-lapse / location validation

Validate location potential, day/night rhythm, relighting and VFX needs before committing.

CASE 02
Fictional architecture / real location

Test architectural integration by day or night and support permits and angle decisions.

CASE 03
Windshield VFX / driving

Align studio work, driving plates, reflections, speed, HUD and sensor logic.

CASE 04
Operational storyboard

Turn a shot breakdown into a shared document for camera, stunts, locations and production.

CASE 05
Optical rule / camera language

Turn an abstract feeling into a concrete shooting protocol that can be prepared.

CASE 06
Invisible AI / economy of means

Replace heavy logistics with a discreet element prepared for live-action integration.

CASE 07
Action / VFX validation

Clarify a move, a set transformation or a complex action before expensive shoot time.

CASE 08
Period texture / stock-shot

Create or adapt visual material: period, archive, environment or insert.

The supervisor page

An AI / visual preparation supervisor does not simply “make images”. The role is to turn a production problem into options that can be validated.

The supervisor connects directing intent, cinematography logic, production constraints, art department needs and VFX limits. The work checks scale, perspective, light, continuity, feasibility and what needs to be captured during the shoot.

Interface

Direction, cinematography, production, art, VFX.

Control

Scale, light, perspective and continuity.

Arbitration

What is shot, simplified or post-produced.

Transmission

Images, notes and references ready to decide.

CASE 01

Time-lapse / location validation

Validate location potential, day/night rhythm, relighting and VFX needs before committing.

Gain: less uncertainty, one shared reference and a decision that can be used before the shoot.

CASE 02

Fictional architecture / real location

Test architectural integration by day or night and support permits and angle decisions.

Gain: less uncertainty, one shared reference and a decision that can be used before the shoot.

CASE 03

Windshield VFX / driving

Align studio work, driving plates, reflections, speed, HUD and sensor logic.

Gain: less uncertainty, one shared reference and a decision that can be used before the shoot.

La tireuse déboule en profondeur dans l'allée du parking. Au fond, Florent et Cécile restent à côté de la voiture.

PLAN 3 — Ronin 40 —
Bascule Florent/Cécile
Vrombissement crescendo, ils se retournent.
Toujours à côté de la voiture.

PLAN 4 — Épaule 50 —
Réaction Florent

CASE 04

Operational storyboard

Turn a shot breakdown into a shared document for camera, stunts, locations and production.

Gain: less uncertainty, one shared reference and a decision that can be used before the shoot.

CASE 05

Optical rule / camera language

Turn an abstract feeling into a concrete shooting protocol that can be prepared.

Gain: less uncertainty, one shared reference and a decision that can be used before the shoot.

CASE 06

Invisible AI / economy of means

Replace heavy logistics with a discreet element prepared for live-action integration.

Gain: less uncertainty, one shared reference and a decision that can be used before the shoot.

CASE 07

Action / VFX validation

Clarify a move, a set transformation or a complex action before expensive shoot time.

Gain: less uncertainty, one shared reference and a decision that can be used before the shoot.

CASE 08

Period texture / stock-shot

Create or adapt visual material: period, archive, environment or insert.

Gain: less uncertainty, one shared reference and a decision that can be used before the shoot.

arly

01

Rapid study

1 to 3 days — One idea, one location or one visual problem. Key images + shooting / VFX notes.

02

Sequence dossier

about 1 week — One complex sequence. Storyboard, tests, visual options and department notes.

03

Preproduction interface

longer prep — Film or series support. Visual bible, image decisions and VFX alignment.

Previsualize to secure.

A decision tool to see earlier, share faster and avoid costly choices arriving too late.
