

ANTOINE GUEUGNEAU

Visual Preparation

for Series & Feature Films

A cinematographer's eye, extended into preparation.

Cinematic preproduction / Live-action integration / VFX alignment

A production function, rooted in cinematography

Visual preparation turns a directing intention into images, sequence tests, framing rules and practical shooting options - before the shoot.

Not AI as spectacle.

AI as a preparation tool for live-action cinema.

It creates a fast interface between direction, cinematography, art department, production and VFX so choices can be seen, discussed and validated earlier.

See earlier. Decide faster. Build more precisely.

The value is not the image itself. The value is the decision it makes possible.

TIME

Faster creative alignment.

RISK

Fewer blind spots.

COST

Lighter solutions.

VISION

A shared reference.

From idea to shared production reference

The work starts from reality - a real location, a real camera choice, a real production constraint - then explores only what can help the film move forward.

Time-lapse and location validation

Scouting images -> time-lapse proposal -> location decision

SCOUTING / REALITY

VISUALIZED SOLUTION

Using scouting images and the real orientation of the location, an urban time-lapse was explored: the character remains at 24 fps while the city moves through sunset, night and morning. Interior relighting options preserve realism and continuity.

Value
Validate the location, anticipate VFX and relighting, and let production see the cinematic potential before committing.

Fictional architecture in a real city

Scouting -> fictional architecture -> location permits

SCOUTING / REAL LOCATION

VISUALIZED SOLUTION

During scouting, a fictional Philharmonic was designed to help the director, production and art department choose a shootable angle. The goal was to place actors in a locked wide shot without green screen and support permits with a clear visual reference.

Value

Reduce VFX complexity, clarify the final image and accelerate location / production decisions.

Windshield VFX and driving sequence

Driving plate -> studio approach -> VFX alignment

DRIVING PLATE

VFX PROPOSAL

Using Paris driving plates, a studio shooting approach was explored to integrate actor, car interior, windshield reflections and game-like graphics. The proposals respect lens choice, sensor logic, speed perception and reflections.

Value
Align cinematography, direction, studio work and VFX before production.

Rapid action visualization

Location scouting -> shot breakdown -> shared storyboard

SCOUTING / REAL LOCATION

After scouting, the director's first shot breakdown was turned into a rapid storyboard to test spatial continuity, camera axes, rhythm and action readability for a short and constrained shooting window.

OPERATIONAL STORYBOARD

SÉQ 1996/01 — INT. JOUR. PARKING SOUTERRAIN

Cécile – Florent – Silhouette tireuse (Agnès doublure)

Tentative d'assassinat sur Cécile

PAGE 1

1

PLAN 1 — Ronin 35 — PS —
Suivi latéral
Florent et Cécile sont arrêtés à côté de la voiture de Cécile, sur sa place de parking.
Florent l'embrasse furtivement.

"Tu veux que je te dépose au Palais ?"
"Je vais prendre ma voiture."

2

PLAN 2 — Ronin 35 —
Travelling avant dos moto
La tireuse déboule en profondeur dans l'allée du parking.
Au fond, Florent et Cécile restent à côté de la voiture.

3

PLAN 3 — Ronin 40 —
Bascule Florent/Cécile
Vrombissement crescendo, ils se retournent.
Toujours à côté de la voiture.

4

PLAN 4 — Épaule 50 —
Réaction Florent
Il capte le danger.
Pré-impulsion du geste.

"Attention !"

5

PLAN 5 — Épaule 35 —
Subjectif Florent
La moto, le casque, l'arme levée, départ de rafale.
Très court, 1 sec.

Value

Create a shared operational document for direction, camera, stunts, locations and production.

Optical rule for a waking nightmare

Emotional intent -> optical rule -> shooting protocol

To make a character feel trapped inside a distorted perception, a shooting protocol was proposed: Steadicam, Lensbaby / tilt-shift optics, character held in the same area of the frame and focus kept in a fixed zone.

Value

Turn an abstract feeling into a concrete shooting method that direction and camera can prepare.

Invisible AI as a production solution

AI element -> long-lens integration -> lighter production

CREATED ELEMENT

PLANNED INTEGRATION / LONG LENS

To avoid the logistics of a dog and handler for a single shot, a dog matching the director's vision was created and validated, then prepared as a discreet long-lens secondary element within a live-action sequence.

Value
Use AI invisibly, reduce logistics and preserve the viewer's focus hierarchy.

How it can be engaged

Rapid study

1 TO 3 DAYS

One idea, one location or one visual problem.

Key images + concise shooting / VFX notes.

Sequence dossier

ABOUT ONE WEEK

One complex sequence or production decision.

Storyboard, tests, visual options and department notes.

Preproduction interface

LONGER PREP

Film or series preparation until shoot.

Shared visual bible, visual decisions and VFX alignment.

A cinematographer-driven preparation layer

ANTOINE GUEUGNEAU
